-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2,3-5,8-10,6-7,11-15 rejected under 35 U.S.C. 102b as being anticipated by Matsumoto(3,754,214).

Matsumoto discloses in fig.1 a device comprising: a piezoelectric material layer(38,40) and a ferroelectric material (44,42) clamp together by conductive plates (48,46), the ferroelectrics material layer having a predetermined direction of polarization (col4 line23-50); and means for providing an input signal (1) to one layer for causing an induced output signal (2) from the other layer without causing a change in the predetermined direction or polarization, the induce out- put signal from the other layer and having a phase determine by the predetermined direction of polarization.

Matsumoto disclose the electrodes one the top (46), bottom (48) and sides of each laminate layers.

Wherein the common electrode (50) is provided between the three layers, the input electrode is provided on the top layer of the ferroelectric layer (44) and the output electrode is provided on the bottom of the piezoelectric layer (40). The method is inherent.

Art Unit: 2834

With respect to claims 3-5, and 8-10: the recitation that the device is a transformer, amplifier or inverter has not been given patentable weight because it has been held that a preamble is denied the effect of a limitation where the claim is drawn to a structure and the portion of the claim following the preamble is a self-contained description of the structure not depending for completeness upon the introductory clause. *Kropa v. Robie*, 88 USPQ 478(CCPA 1951)

Conclusion

Response to Arguments

3. Applicant's arguments with respect to claim 1-15 have been considered but are moot in view of the new ground(s) of rejection.
